

Exercises 13

Pandas

475

Pandas

Exercise 01

- Load the dataset (cancer.csv)!

Pandas

Exercise 02

- Print an overview of the dataset.

Pandas

Exercise 03

- Print 13 last samples of the dataset.

Pandas

Exercise 04

- Print states with total rate of less than 200

Pandas

Exercise 05

- Print number of states with total rate of less than 200

Pandas

Exercise 06

- Print rows between 53 and 112 , and columns between 14 to 82 (use iloc)

Pandas

Exercise 07

- print unique values of the Rates.Age.< 18 column!

Pandas

Exercise 08

- print mean of the Rates.Age.< 18

Pandas

Exercise 09

- Find max of Total.Population and subtract all values of Total.Population column from the maximum value using lambda function.
